CEMO
for safe storage

BATTERY SAFETY

Perfect match!

Modular system for battery storage and charging cabinets

More flexibility

Modular, stackable system

More safety

Reduction of explosion and fire load hazard
due to lockEX mechanism

Less risk

by separating charging and storage

A perfect fit!

Decide on the model that fits your business. For example, use one safety cabinet for charging lithium batteries and another for storage. Stack and extend various units according to your needs.

Thanks to the modular concept and different cabinet models, you can easily adapt the storage space. Additional models listed overleaf.

CEMO Modular system for battery storage and charging cabinets „lockEX inside“ PG 9

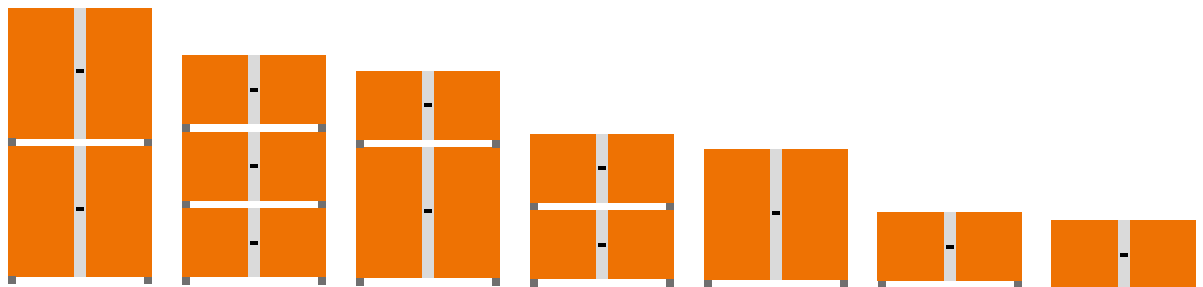

The solution for more safety and less risk:

- Reduction of the risk of explosion and fire load by dividing into danger zones with several battery cabinets (Compartmentalisation)
- Variable heights in 62 cm increments (8/5) or 111 cm (8/10)
- Variable subdivision of shelves:
One to four shelves per 111 cm (8/10)
- Fire chamber-tested, stackable modular system that is user-configurable
- Signals can be linked (Premium/Premium Plus) to several cabinets
- Separate cabinets can be assigned to different fields of activity/teams
- Systems are easy to transport as they can simply be stacked on site

Model 8/10 Battery storage or charging cabinet (storage cabinet shown)

Model 8/5 Battery storage or charging cabinet (charging cabinet shown)
